ADSS Server Test Tool v4.3
March 2011

- Sending requests to ADSS Signing and Verification services has been enhanced by:
 - (a) Providing support for PAdES signatures based on ETSI PAdES standard (TS 102 778);
 - (b) Providing extended support for XAdES and CAdES specifications;
 - (c) Supporting the request for creation of PDF signature fields using X/Y coordinates (OASIS DSS-X profile).
- Sending requests to ADSS Signing, Verification, XKMS, Certification and LTANS services has been extended to support SOAP v1.2.
- ADSS Verification and XKMS service requests have been enhanced to support enveloping XML signatures. The ADSS XKMS Service request messages additionally support detached XML signatures.
- ADSS Verification, SCVP and XKMS service requests have been extended to support PKITS compliant path discovery and path validation. The Verification and XKMS service requests have also been enhanced to extend support for detailed PEPOL requirements.
- Request timeout is supported in requests to all ADSS services.
- Added support for sending request messages to newly licensed Verification Gateway service.
- ADSS Server Test Tool libraries were re-compiled to work with the latest ADSS Client SDK v4.3 and ADSS Server v4.3.

ADSS Server Test Tool v4.2.1 (Patch release)

ADSS-Client Tool v3.8**October 2009**

- ADSS-Client Tool libraries were re-compiled to work with the latest ADSS Client SDK v3.8 and ADSS Server v3.8.

ADSS-Client Tool v3.7**August 2009**

- Support added to perform local hashing so that only hash of the documents is sent to the ADSS Signing Service instead of sending the full documents thus reducing network traffic for enhanced performance.
- Support added to request empty signature field generation from the ADSS Signing Service.
- Support added to provide signed authorisations in signing request messages to the ADSS Signing Service such that end-users can approve the use of a server-held signing key. An M of N scheme is implemented so that any M authorisers out of total N can give their signed approval within a signing request.
- It is possible to provide various signature attributes to override the ones configured in the document signing and signature appearance profiles (e.g. signing page, signing area, signature field, signing reason, signing location, contact information, signed by, signature appearance for local hashing, hand signature and company logo images).
- Support added to send certificate creation, renewal, deletion and change password requests to the ADSS Certification Service.
- Support added to send signature verification and certificate validation requests to the ADSS Verification Service using OASIS DSS protocol.
- Support added to send certificate validation requests to the ADSS XKMS Service.
- Support added to send the documents to be archived to the ADSS LTANS Service.
- Support added to send document signing requests to the ADSS Signing Service over secure SSL channel with client authentication.
- Support added to sign request messages being sent to the different services of the ADSS Server.
